

# scPOST 2020

## Welcome to scPOST 2020

Software Cradle is proud to announce the release of scPOST Version 2020, a part of the comprehensive suite of virtual product development from MSC Software.

Below is the detail of what's new to scPOST. For more information, visit our Users Page.

We trust you are now familiar with your software package and the supporting aids and services available to you and thank you for the investment you have made in our virtual product development from MSC Software.

## Enhancement for Solver outputs

### Actran

A complex data file(\*.h5) of the analysis result from Actran can be imported. Fluid and sound fields can be visualized simultaneously during fluid-acoustic coupled analysis. Series of graphs indicating sound pressure level and such can be displayed.

Propagation of acoustic wave

### Adams

Adams Solver Dataset (.adm) and Adams Result (.res) files can be imported. Fluid field and motion can be visualized simultaneously during fluid-motion coupled analysis.

### Marc

Support for mid-side nodes of element.

### Nastran

Support for multiple input and result domains in one file.  
Support for pyramid elements in MSC Nastran 2019 (nas, bdf, dat).

## Enhanced Visualization Features

Span and meridian planes required for turbomachinery design can be visualized. Not only the results from Cradle products but also from unstructured mesh solver can be imported to scPOST.

### Enhanced turbomachinery object

Span surface

Angle surface and meridian plane

### Ray object

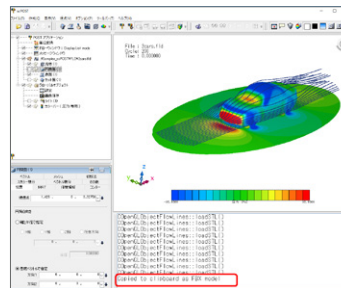

Visualization focusing on light can be done when using lamp feature implemented in scFLOW and scSTREAM.

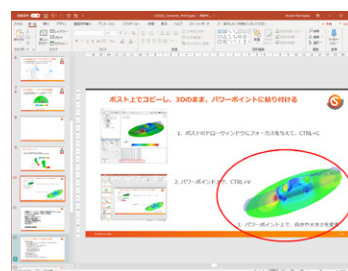

Visualization of automotive headlamp rays

## Enhanced Output Feature

The displayed object in scPOST can be copied & pasted directly into Microsoft products including PowerPoint. The orientation and size of the object can be changed in that application.

CTRL+C in scPOST

CTRL+V in PowerPoint

Control the orientation and size in PowerPoint

(Drag the  icon displayed in edit mode)
